Current problems in Arctic archaeology

Anderson, Douglas.

Even after a century of archaeological research in the Western American Arctic several new - and old - problems persist that frame much of our archaeological enterprise. These include the old problem of the Western Arctic's role in the Early Man Question, the prehistory of the entire Early and Middle Holocene, and the beginnings of whaling. In addition, I would like to discuss some broader issues concerning the nature of our interpretations and fate of our archaeological collections.
